- Food
- Shopping
- Bills
- Transport

Relationships

- Belongs to one User.
 - Has many Transactions.
-

Transaction

Represents a financial movement.

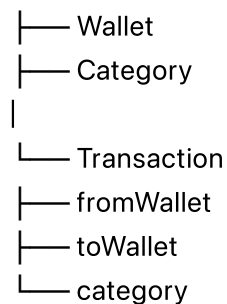

Relationships

- Belongs to one Category (nullable).
- References one source Wallet (nullable).
- References one destination Wallet (nullable).

Fields

- id
- amount
- currency
- type
- description
- merchant(nullable)
- category (nullable)
- fromWallet(nullable)
- toWallet(nullable)
- createdAt
- updatedAt
- transactionDate

User

Design Decision

Transactions support three types:

- Income
- Expense
- Transfer

Transfers use both `fromWallet` and `toWallet`.

Income uses only `toWallet`.

Expense uses only `fromWallet`.
